

Instructions for Lab Ln

Instructions

Follow these steps to complete the DSA lab efficiently. Make sure to read and understand each step before proceeding.

Step 1: Extract the Zip File

Unzip the downloaded zip file. Only start editing the files after unzipping.

Step 2: Read the Lab Questions

Refer to the lab questions provided in the file `Ln.pdf`, where `Ln` is the lab number (e.g., `L1`, `L2`, `L3`, etc.).

Step 3: Grant Execute Permissions to Files

Run the following command to grant execute permissions to the required files:

```
:~$ chmod +x RunTestCase CreateSubmission
```

Step 4: View Input and Expected Output for Test Cases

To view the input and expected output for test case `T1`, use the following command:

```
:~$ ./RunTestCase Ln Q1 YourBITSId T1
```

Replace `YourBITSId` with your 13-character BITS ID, written in uppercase. Replace `Ln` with the lab number (e.g., `L1`, `L2`, `L3`, etc.).

Step 5: Compile and Run Your Program

Modify the file `Ln_Q1_solution.cpp` to solve problem `Q1`. Use the following command to compile and run your program for test case `T1`:

```
:~$ ./RunTestCase Ln Q1 YourBITSId T1
```

Repeat this step until your program passes all test cases (e.g., `T1`, `T2`, etc.).

Step 6: Run Evaluative Test Cases

Run the evaluative test cases using the following command:

```
:~$ ./RunTestCase Ln Q1 YourBITSId ET1
```

Repeat this step until your program passes all evaluative test cases (e.g., `ET1`, `ET2`, etc.).

Step 7: Solve Question 2 (if applicable)

If the `Ln.pdf` file includes Question 2, follow Steps 4, 5, and 6 for Q2. Modify the file `Ln_Q2_solution.cpp` accordingly. Replace Q1 with Q2 in the commands.

Step 8: Create and Submit the Zip File

When you are ready to submit, create the zip file using the following command:

```
:~$ ./CreateSubmission Ln YourBITSId
```

The output of the above command should show that all the C++ files have been included in the zip file. Upload the zip file on Quanta. Do **not** rename or modify the zip file in any manner. Only zip files created using the `CreateSubmission` script will be evaluated. Files created by other methods will **not** be evaluated.

Important Note

The lab ends at **3:50 PM**. Submissions will only be accepted through Quanta and must be submitted before the deadline. Submissions via email or other means will **not** be accepted. Ensure your submission follows the instructions to avoid disqualification.
