

Linked List

Materials:

- [Linked List Data Structure - GeeksforGeeks](#)
- [Learn Linked Lists in 13 minutes](#)

⚠️ Disclaimer ⚠️: These questions are **VERY** irritating.

Standard problems (Important to solve)

- [Middle of the Linked List - LeetCode](#) Make sure to solve using “Fast and Slow Pointer” method
- [Intersection of Two Linked Lists - LeetCode](#) Try to solve in $O(1)$ **Space complexity**.
- [Merge Two Sorted Lists - LeetCode](#) Make sure to solve using “Dummy Pointer” method
- [Remove Linked List Elements - LeetCode](#) “Dummy Pointer” method
- [Reverse Linked List - LeetCode](#)

Medium level

- [Remove Nth Node From End of List - LeetCode](#) Very irritating problem.
- [Linked List Cycle II - LeetCode](#) Try to use “Fast and Slow Pointer” method
- [Reorder List - LeetCode](#)
- [Reverse Linked List II - LeetCode](#)
- [Odd Even Linked List - LeetCode](#)
- [Add Two Numbers - LeetCode](#)
- [Copy List with Random Pointer - LeetCode](#)

Hard level

- [Reverse Nodes in k-Group - LeetCode](#) Not really THAT hard. Can do if you solved the Medium level problems
- [Merge k Sorted Lists - LeetCode](#)
- [Minimum Pair Removal to Sort Array II - LeetCode](#)

Can't find more “HARD” problems for linked list as most other problems are design oriented like LFU and stuff.

If you all want to solve design oriented problems (may be important for interviews), then you can refer to these problems:

Design oriented problems (Completely optional)

- [All O`one Data Structure - LeetCode](#)
- [LFU Cache - LeetCode](#)

- [Design Skiplist - LeetCode](#)
- [Design a Text Editor - LeetCode](#)
- [Insert Delete GetRandom O\(1\) - Duplicates allowed - LeetCode](#)
- [All O`one Data Structure - LeetCode](#)

If you guys want more design problems then you can refer: [Design - LeetCode](#)

problems marked in **RED** are supposed to be important and you are supposed to try these questions yourself with pen and paper. Try not to look at solutions since these questions will help you understand binary search in depth.

problems marked in **GREEN** are supposed to be niche questions, meaning, these are questions that are rare to be asked anywhere since they are kind of specific. But I would recommend you solve it since it will help you.
